

**Maple5 Announces the launch of “Secret Server” in the UK to address the increasing demands for managing Privileged Passwords among IT administrators and managers**

**Reading, January 24th, 2012** – Maple5 Ltd, a distributor and market maker for overseas technology companies, has announced the launch of Thycotic Software Limited’s, Secret Server, privileged password management solution into the UK market.

The Secret Server solution is a web based repository for creating, sharing and managing enterprise passwords or “secret” information. The administrator can assign user permissions at any level, and track password usage with full audit reports - an important factor for any organisation looking to achieve SOX and PCI DSS compliance.

“The old adage that passwords are like underwear rings as true now as it ever did,” says Dan Power, Sales Director at Maple5 Ltd. “Don’t leave them lying around, don’t share them and change them regularly. The issue for the modern IT department is how do you manage and automate this task and also be able to demonstrate you have done it for compliancy reasons. Secret Server takes the pain out of this process.”

“The complexity of the modern IT infrastructure has led to a massive increase in the number of passwords required to manage a secure computing environment,” said Jonathan Cogley, founder and CEO at Thycotic. “Now with the increased use of contractors, partner organisations and the general churn of staff in the current economic climate the challenge of resetting passwords as people leave has become a job in itself. Secret Server automates resetting these passwords, even down to the Service Accounts, saving hundreds of hours per year.”

The Thycotic Secret Server solution starts at £55.00 per user for the standard edition. A free version of the solution is available for personal use from the Apple AppStore. This version will also integrate with the enterprise version.

**About Thycotic**

Thycotic Software Ltd develops software for securing and managing passwords both at the Administrator and the End User level. The current products include Secret Server and Password Reset Manager. Located in Washington, DC, Thycotic was founded in 1996. More information about Thycotic can be found at [www.thycotic.com](http://www.thycotic.com).
