

Spamina Email Service Firewall

Are you risking the security of your business?

95% of emails entering business networks every day are spam and/or infected with malware, increasing vulnerability to security breaches and decreasing employee productivity.

Plus, your business must meet specific legal requirements regarding the control and protection of data.

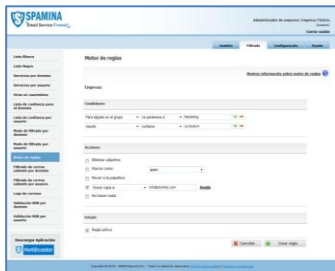

Protect your email 24 x 7 x 365

Email remains the most critical component of business communications today, so IT departments must be able to guarantee maximum service availability while providing full protection against malware, spam, and phishing attacks.

Spamina Email Service Firewall solves both problems by delivering 100% effective email protection that can scale to meet the changing needs of businesses over time, combining ease of deployment, simplicity of management, and minimal latency in email delivery.

Management and Control

From the web user interfaces available for the different profiles, administrators can perform multiple tasks, including configuring email firewall settings, controlling the log of emails received, and even managing quarantines. The system can also be set to immediately notify you of potential breaches and security incidents.

Service Operation Spamina Email Service Firewall

Service Modalities

Key Benefits Spamina Cloud
